## PRESS RELEASE

For immediate release

# Euresys Embraces Linux

*Euresys Announces Linux Support for it's Popular Picolo Series of Products*

Euresys Picolo series of capture boards meet a great success. Many Video surveillance OEMs and integrators have already based their system on the reliability and the excellent price-quality ratio of the Picolo series.

This success leads Euresys to continuously enhance the range of the Picolo family, proposing new products further dedicated to specific video surveillance applications.

Euresys is now adding Linux support to the already existing and strong support of Windows 98SE, NT, 2000 & XP.

Euresys customers are now able to combine the ease-of use of the Multicam driver with the cost-effectiveness of Linux.

MultiCam Driver for Linux already supports Picolo, Picolo Pro 2, Picolo Pro 3i, MIO and will support very soon Picolo Tetra.

## EURESYS

As a leading company in the field of machine vision and image processing, Euresys designs, manufactures and markets PCI and cPCI image acquisition boards and image processing software for industrial, semiconductor inspection, medical and video-surveillance applications. Hardware products include video capture boards optimized for video-surveillance applications and frame grabbers for standard, analog, digital cameras and DSP boards. Software products include image analysis tools for sub-pixel measurement, industrial geometric template matching, color inspection, blob analysis, image processing, OCV, OCR, BGA inspection, data matrix code and bar code reading.

Euresys has also a strong ten-year experience in specific solutions for OEM.

As a worldwide company, Euresys has a strong presence all over the world: in Europe with Euresys s.a., the corporate headquarters; In Asia, Euresys has a Representative Office located in Singapore; In America, Euresys Inc is based in Dallas, Texas.
